### Beck Mickle Hydro Ltd

Local electrician Ian Gilmartin has designed a waterwheel that can produce electricity, even from shallow streams.

During Green Build Fortnight 2007, Ian gave a lively presentation to the public at the Environment Agency's HQ in Penrith. He described his patented technology, which makes use of recycled plastic materials in a low cost turbine that has minimal impact on the ecology of small streams.

Ian Gillmartin, 28 Northumberland St, Morecambe, Lancs, LA4 4AY
