Location

The Office, Mardale Road, Penrith, CA11 9EH

Principal Sustainability Product / Services

Architect and Designer

Formed in 2002 adhoc associates is a design led architectural practice specialising in low impact environmentally benign projects particularly in rural areas. We generate all projects through dialogue with our clients whether an individual or community.

Working with commercial, community and private clients over all building sectors, the practice endeavours to achieve inspiring, low impact buildings working with a core group of specialist consultants. The most recent project epitomising our approach is the Cockermouth School Eco Centre. This building demonstrates a range of "sustainable" technologies and materials as part of a flexible teaching and learning resource for the school and wider community.

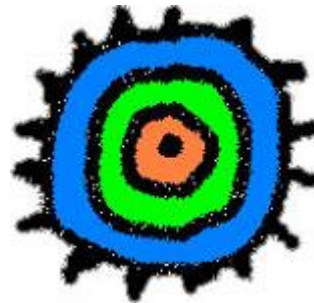

We use state of the art 3D CAD design combined with environmental analysis software to provide dramatic visual presentations of projects from concept stage through to production drawings.

We can also offer brief writing and project coordination as well as the full range of architectural services. Initial discussions are free.
